

Laura Sofía Marcenaro

Software Engineer | Full Stack JavaScript/TypeScript

lausofimarc@gmail.com

Buenos Aires - Argentina.

[LinkedIn](#) [Github](#)

Software Engineer with 3+ years of experience building and maintaining SaaS products for U.S.-based startups. Specialized in the JavaScript/TypeScript ecosystem, working across React, Node.js, and GraphQL architectures. Currently focused on AI-assisted development: building my team's agent tooling — custom skills, review and deploy agents, and MCP integrations — and debugging LLM-driven product features. Experienced in product development, system migrations, subscription platforms, and data/BI integrations. Known for strong ownership, problem-solving skills, and effective collaboration in remote teams.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, Redux, TailwindCSS

Backend: Node.js, NestJS, GraphQL, Prisma, PostgreSQL, MongoDB

AI / GenAI: LLM agents (Cursor, Claude), MCP integration, agent skill design, prompt engineering, AI-assisted code review & evaluation, OpenAI API

Cloud & Infrastructure: AWS Serverless

Data & BI: DBT, Metabase, Starburst, Fivetran

Auth & Payments: Stripe, Auth0, Clerk

Tools: Git, Postman, Linear, Miro

PROFESSIONAL EXPERIENCE

Software Engineer (Mar 2026 - Present) - Embeddables, USA (Remote)

- Lead the team's AI-assisted development platform: authored reusable agent skills and custom agents (PR review, production deploy, change tracing) for Cursor/Claude, integrated via MCP with GitHub and Linear.
- Built a tracing-based workflow to debug the production LLM assistant, correlating execution traces, tool selection, and parameters to root-cause incorrect responses.
- Build and maintain features and fixes across the platform while supporting ongoing product stability and scalability.
- Work cross-functionally with product and customer-facing teams to deliver scalable solutions for U.S.-based healthcare clients.
- Collaborate closely with EHR/EMR platforms to integrate healthcare systems into client-facing web solutions.

Frontend Engineer (Mar 2025 - Mar 2026) - Embeddables, USA (Remote)

- Worked directly with clients to implement custom web solutions using JavaScript and CSS through the company's low-code platform.
- Built and customized advanced UI components to meet non-standard client requirements.
- Assisted teammates with complex implementations including API integrations and technical troubleshooting.
- Collaborated across teams to deliver scalable and maintainable solutions for client projects.
- Integrated EHR/EMR systems into client-facing healthcare solutions.

Full Stack Software Engineer (Mar 2023 - Feb 2025) - Trades.org, USA (Remote).

- Developed frontend and backend features for SaaS platforms using React, Node.js, GraphQL, and PostgreSQL.
- Built a reusable component library with Storybook to standardize UI development across projects.

- Migrated the company website from JavaScript to TypeScript, improving maintainability and developer experience.
- Led backend migration efforts from PostgreSQL to MongoDB and contributed to a microservices architecture using Apollo Federation.
- Designed and implemented a subscription and billing system using Stripe.
- Migrated the authentication system from Auth0 to Clerk.
- Planned and led a Business Intelligence initiative with the Marketing team using DBT, Metabase, Starburst, and Fivetran.

Full Stack Teaching Assistant (Sep 2022 - May 2023) - SoyHenry Bootcamp, Buenos Aires, Argentina.

- Mentored students during the Full Stack Web Development program.
- Assisted with debugging, architecture decisions, and coding exercises.
- Facilitated collaborative learning through pair programming and group problem-solving.
- Proposed improvements to internal bootcamp processes.
